FERNO A&E

Out-of-car-kit

Developed to extricate a patient from a car and into A&E with the minimum of fuss

At Ferno we take manual handling very seriously, the combination of bad practice and the wrong equipment can put an Emergency Services Professional out of action for weeks **plus** the confidence and comfort of a patient during rescue is of prime importance. The A&E out-of-car-kit is a simple effective method to transfer a seated patient from out of a car and onto a stretcher trolley in seconds.

Transglide Board and Footwell Cube

- **Lightweight yet incredibly strong** – the flexible, slimline board is used to quickly manoeuvre the patient out of confined car spaces
- **Saves vital seconds of rescue time** – the Footwell Cube fills the entire footwell area, front seat or back, providing vital support as the patient is pulled out of the car

For the kit to be effective it must be used in-conjunction with a Stretcher Trolley with a minimum loading height level of no higher than 480mm, such as the Ferno Falcon, Pegasus & Harrier.

Part Nos:
010782100 Transglide A&E Board
038300201 Footwell Cube

Please quote both part numbers when ordering the A&E kit, each product can be purchased separately.

Footwell Cube supports the board

Board slides easily under the patient

Patient is helped onto the board

Patient pulled onto the Stretcher Trolley

Patient transfer is complete FAST AND SAFE!
